AND FINALLY...

❖ Solar Panels Update

The solar panels have been in for just under a month and we have already saved £100 by using energy they have generated! This figure will only get bigger as the amount of sunlight increases as the days are now getting longer. Using the unspent contingency from the project, we also managed to get a voltage optimiser installed as well. This is a device that lowers the voltage in the building which should mean that most equipment uses less energy, and so saves us money. Also, the building used to have two separate electricity supplies, but these have now been moved over to one single supply. This means that energy generated by the solar panels can now be used everywhere in the building and, with only one supply, we will only have to pay one standing charge. Please thank God for all of these electrical upgrades and for the carbon and monetary savings they will bring.

❖ Dry Rot Update

The Methodist Church Conservation Officer, who is responsible for all the listed Methodist buildings in the country, is not happy with using any chemical treatment on the dry rot in the Upper Room cupboard. Instead, we will be removing and replacing all damaged timber, repairing the roof and ventilating the area. This should be enough to stop it returning, but prayers that this works would be much appreciated! We don't have a final cost for this work yet, but since it excluded treatment work it will be lower than the previous estimates. But it is good that we now have an approved way forward so we can start to address the problem.
